6. Forensics #1
  - a. Let  $C$  = ciphertext,  $K$  = key,  $P$  = plaintext. From xor properties we know that  $P \oplus K = C$  implies  $C \oplus P = K$ . Since we know  $C$  and a part of  $P$ , assuming that the xor key isn't as long as the message (thus it must be repeated multiple times) we can just use this property to get a repeating sample of the key.  $K = B3s7\_5h0W$
  - b. Now using the key we can decrypt the ciphertext and get the full plaintext using the equation  $C \oplus K = P$ .  $P =$  For honesty no pony can deny, you are the Applejack of my eye
